The **Elastrac™** harnesses of the HT44 - HT45 - HT46 range are the first of a new generation of harnesses providing this high level of comfort. The **Elastrac™** harnesses, range are designed to ensure maximum comfort by their mountaineering-type sub-pelvic and leg straps. The special design of the shoulder straps in the rectangles located on the back ensures full freedom of movement to the worker by dissociating the workers shoulder movements from the rest of his body. These packs (two on each harness) are used to adapt the elongation of the harness straps to the users body shape, stretching the strap which each movement. They ensure an elastic to-and-fro movement of the strap over 4 cm. Lab tests have demonstrated alteration-free to-and-fro strap movements of better than 1 000.000 cycles
