

## Vacuum Load Lifting Devices

The FEZER vacuum load lifting devices convince by their robust design, their long-life cycle and above all by their easy handling combined with high safety features.

They increase the efficiency and profitability of production processes as well as work safety and ergonomy. Using vacuum load lifting devices relieve the operators and prevent a high illness rate caused by overwork.

FEZER vacuum load lifting devices support your daily work, increase the productivity and work safety combined with comparably low investment costs. Look and see.

# Vacuum Load Lifting Devices

## Introduction

### Areas of Application

The individual device series is designed for various applications and ensure a process-safe and economical production run. With the help of vacuum technology workpieces can not only be easily and fast engaged but also be transported damage-free and safely. For these reasons the lifters are being used in many fields of industry:

- Handling of aluminum, steel, glass, chipboard and plastic plates
- Handling of coils and split strips
- Transport of wood, gluelam beams, chipboards, MDF and OSB plates
- Feeding of CNC, punching and nipple machines
- Commissioning, putting into and out of storage
- Used in roller mills, automobile industry, wind energy, aeronautics, stone and concrete industries

### Unique Safety Concept

All device series are absolutely safe, reliable and correspond to the current DIN EN 13155. Largely dimensioned vacuum safety tanks and integrated warning units ensure the highest operational safety, also in case of a power failure.

Additionally all manually operated FEZER lifters are equipped with the unique „Main Switch Supervision“. This feature sends out a warning signal should loads become engaged solely by the remaining vacuum in the tank while the main switch is off. This supervision sets new standards on vacuum load lifting devices when it comes to operational safety.

### VacuBoy in Action

- 1 Feeding a laser cutter with the help of a VacuBoy
- 2 Transport of metal sheets by a VacuBoyMini in power-independant battery design
- 3 VacuBoy for commissioning steel sheets
- 4 VacuBoy VB-180E for turning over furniture parts

### Basic Equipment

FEZER vacuum lifters convince by their clever design. The lifters can be adjusted to individual customer's requirements and desires easily and problem-free. The devices have very high safety and comfort features as a standard:

#### Safety:

- Main switch supervision on lifters with handslide valves (warning signal when loads are engaged with turned-off main switch)
- Large-dimensioned safety tank integrated in the lifter's main beam
- Non-return valve between vacuum generator and safety tank
- Manual vacuum control by lockable handslide valve
- Vacuum gauge with „red-green“ area for visual supervision
- Acoustic warning unit for decrease of vacuum and power failure
- Large-dimensioned vacuum filter to protect the valves and pumps

#### Comfort:

- Push-buttons with emergency-off on lifters with electrical movements (swivelling, turning over, or rotation)
- Various suction pads for smooth, rough or grooved surfaces
- Movable suction pads to adjust to varying workpiece dimensions

Main switch surveillance by vacuum switch in distribution line

Acoustic warning unit goes off in case of vacuum decrease or power failure

Vacuum gauge for visual supervision of the operational vacuum

Non-return valve to prevent a venting via the pump in case of a power failure

Vacuum safety tank for short suction times and safety in case of power failure

Manual vacuum control via handslide valve with arrest

Large-dimensioned dust filter with exchangeable filter cartridge

Manipulating handle with push-buttons and emergency-off on lifters with electrical movements

Suction pads with cross clamping piece to adjust on the cross beam

Mounting element with clamping screw to adjust the cross beam

Manifold selection of suction pads for different surfaces

Powerful, robust and low-maintenance pumps for highest safety

### Options

The lifters can be additionally equipped with a multitude of options to meet your individual safety and comfort requirements:

#### Safety:

- Optical warning unit with large green and red lamp for „ready for operation“ and „malfunction“ and acoustic howler on power failure
- Disposal stands to protect the suction pads when lifter is set down

#### Comfort:

- Electrical vacuum control with two-hand operation via push-buttons
- Switching automatic with alternate suction and release activation
- Universal holder for crane pendants with Velcro fastener
- Electrical control functions by push-buttons for crane movements
- Vacuum-controlled motor switch to save energy and reduce the noise level

#### Further Options:

- Swivel feature with angle adjustment of the manipulating handle
- Water separator for use on water jet machines
- Battery pack for operation independant of power
- Air pack with pneumatical warning unit for compressed air operation

Optical warning unit with green and red lamp and howler for power failure

Electrical vacuum control via solenoid valve

Switching automatic with automatic suction and release on setting down

Universal holder for crane pendants

Direct control of crane movements via push-buttons on the manipulating handle

Disposal stands for safe parking of the lifter and protection of the suction pads

Vacuum-controlled motor switch to save energy and reduce the noise level

Water separator with manual drain for outdoors use or on water jet machines

Swivel feature for angle adjustment of the manipulating handle

Ball valves to switch individual suction pads on and off

Air Pack: strictly running on compressed air via ejector and pneumatical warning unit

Battery Pack: power-independant operation via 24V pump and batteries

## VacuBoy

Standard vacuum lifters for handling plate materials with dense, flat or structured surfaces and a weight of up to 2.000 kg.

Depending on the requirements the designs vary from strictly horizontal, swivelling or turning over of workpieces as well as special designs for individual solutions.

Vacuum Load Lifting Devices

VacuBoyVario VBV

The Variable One up to 500 kg

The VacuBoyVario is a universally suitable lifter. Loads can both be lifted horizontally and vertically, or else lying loads can be uprighted. The suction pads, which can be individually switched on and off, only need to be placed correspondingly.

The rope suspension of the suction pads and the resulting narrow design make the VacuBoyVario a very variably suitable device.

- Horizontal and vertical handling
- Handling and installation of glass and window elements
- Handling of large-size sandwich elements
- On construction sites with 2-circuit-system

Capacity hor. / vert. (kg)	Type	Workpiece dimensions		Pump	Number of suction pads	L1 (mm)	B1 (mm)	B2 (mm)	H (mm)	A (mm)	Own weight (kg)
		max (mm)	min (mm)								
125/75	VB 100-2	2.500 x 1.250	400 x 800	T 4.8	2	800	125	150	800	60	40 ... 45
250/125	VB 100-2	3.000 x 2.000	600 x 1.200	T 4.8	2	800	220	150	800	60	50 ... 55
500/250	VB 100-2	3.000 x 2.000	600 x 1.200	T 4.8	2	800	290	150	800	60	60 ... 70

VacuBoyVario VBV in Action

- 1 Lifting steel sheets up to 200 kg
- 2 VacuBoyVario while handling the glass dome of a submarine
- 3 Handling terminal box elements for the electronic industry
- 4 Transporting steel containers up to 150 kg

### VacuBoy in Action

- 1 VacuBoyMini mounted on a pallet truck with 4-pad attachment for simultaneous transport of 4 drums
- 2 Swivelling VacuBoy for handling foil-wrapped sandwich elements
- 3 VacuBoyMini for power-independent operation via batteries for transporting small aluminum blocks
- 4 Strictly vertical lifter for handling camper fronts
